Smart Mobility

Try being healthier, not pollute and do a lot of sport. Here are some reasons why

When people come home in the evening I am sure this is not really pleasant for them .

Instead, you could just avoid all the traffic by taking an electric scooter

Other options

- We also recommend the underground, even if there are a lot of people there, you will arrive before you even blink.
- If the underground is too far, that's also not a problem. You can easily use your bike.

Here we made a comparison between the same distance but with different means of transport

The road from Soseaua Mihai Bravu to IOR in the evening

- With a car:

- 10 minutes, very crowded, the stop lights were a very short time on the colour green.

- although it took a shorter time, we wasted more money on gas and did not do any sport. Plus we polluted which we all should stop doing.

- With a bike:

- 12 minutes, not a big difference

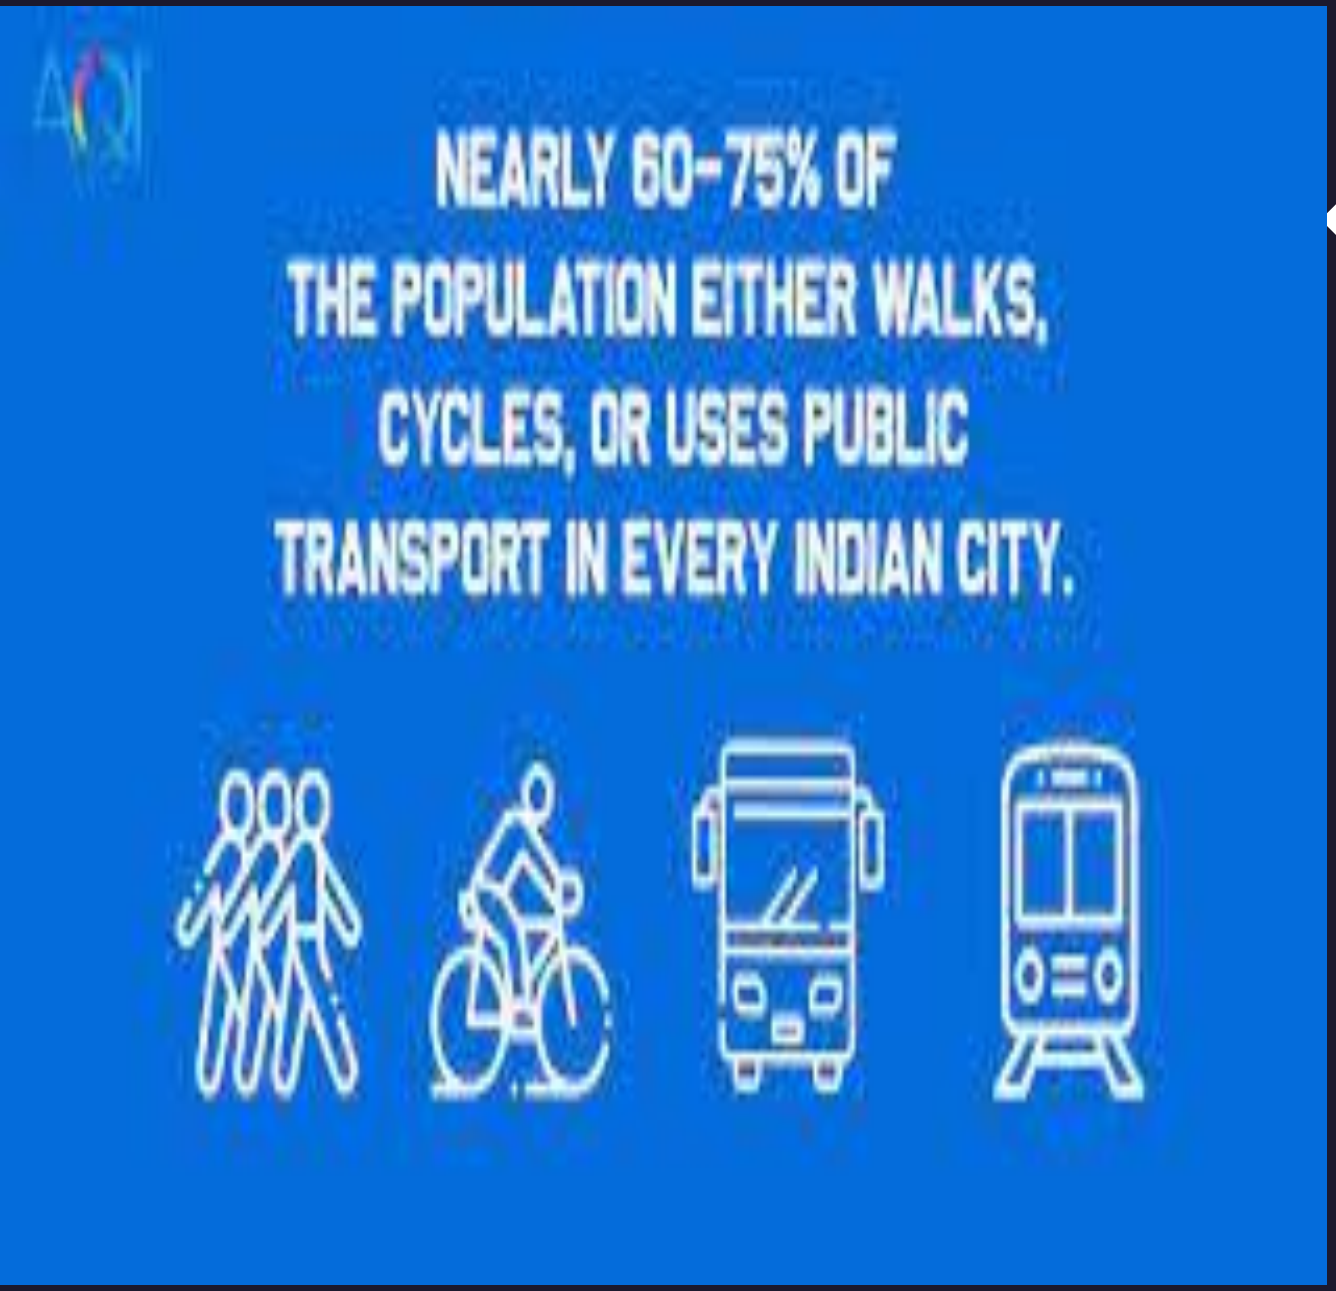
- the sidewalk was almost empty so it was not dangerous

- no road for bikes on the street ,

- we made the healthier choice.

Some improvments that could be made

- More bike roads
- Improved stop lights, fixing the broken ones
- More bus or tram fences that separate the cars from the tram lines.
- More traffic police in the places known for being crowded.
- New streets, pavement without pits.



- That is why you should always choose the healthier means of transport when you have the possibility.
